## MyCellePro ${ }^{\text {™ }}$

## PRODUCT SPECIFICATION

## Description

MyCellePro ${ }^{\text {TM }}$ is an egg yolk isolate that naturally exists in a micellular form. It can be used in microemulsion technology to encapsulate fat-soluble (water-insoluble) active ingredients and improve their bioavailability in the body. It contains $20 \%$ phospholipids, $25 \%$ hydrolyzed proteins, and $55 \%$ triglycerides with a significant amount of healthy omega 6 and 9 fatty acids, with some omega 3 s as well. When delivering nutraceuticals to the body the proteins help ensure the fat-soluble compounds are protected until they arrive at the place of absorption, ensuring optimal active ingredient delivery.

## Applications

MyCellePro ${ }^{\text {TM }}$ has a broad range of useful applications. As it is not extracted through solvents, it is a fully natural product. It is isolated through mechanical means and has applications in micelle technology in nutraceuticals as well as cosmetic products. In addition to being a bioavailability enhancer, it contains valuable nutrients and allows the microencapsulated active ingredients to be added to baked goods, smoothies, or beverages. Its dry powder form makes it easy to use and store.
